

JOHN PRUTTON

Full Stack Software Engineer

johnrprutton@gmail.com • [GitHub](#)

PROFESSIONAL SUMMARY

TypeScript engineer who ships software that lasts. I reach for Effect-TS when correctness and composability matter, Next.js when speed and quality can't be traded off, and clean architecture when the problem demands it. At Metronomic I've shipped real-time dashboards, modernised legacy systems, and delivered production tooling across a broad stack. I'm drawn to teams where the engineering bar is high and the problem space is new.

PROFESSIONAL EXPERIENCE

Full Stack Software Developer

Metronomic

Sep 2024

Full stack development in the utility sector, working across a diverse technology stack including modern JavaScript frameworks, backend services, and data infrastructure.

- Built a real-time billing dashboard integrating with third-party data source via API, processing webhooks to deliver critical billing insights to business about payment statuses of clients
- Architected the dashboard as a Next.js, TypeScript, and Effect-TS monorepo, ensuring type safety and maintainability across the codebase
- Modernised a legacy Angular application by integrating interactive data visualisations using D3.js, improving data clarity for end users
- Work across a broad technology stack including Docker, Node.js, React, Angular, C#/.NET, MongoDB, Microsoft SQL, and RabbitMQ

Freelance Software Developer

Freelance

Jan 2022 - Aug 2024

Delivered full stack web development projects for various clients, with a focus on Next.js and TypeScript. Built and shipped production applications independently, managing projects from scoping through to deployment on cloud and self-hosted infrastructure

EDUCATION

University of Cape Town

Bachelor of Science in Computer Science and Mathematics

PROFESSIONAL SKILLS

Frontend: TypeScript, Next.js, React, Angular, Vue.js, TailwindCSS, SASS

Backend: Node.js, Effect-TS, C#, .NET, RabbitMQ, REST APIs, Webhooks, Web sockets

Engineering Practices: System Design, Clean Architecture, SOLID Principles, Domain-Driven Design, Monorepo Architecture, API Design, Code Review

Databases: MongoDB, Microsoft SQL, PostgreSQL, EventStoreDB

Infrastructure & Tooling: Docker, Monorepo architecture, Unix, Git, GoCD, Playwright
